

Crafting futures, seamlessly.

An AI product studio turning ideas into production-ready web and mobile applications — usually in four to six weeks, not four to six months.

What's inside

06	Writing & ideas	10
07	Reputation & engagement	11

In brief

CloseFuture is a small, senior studio that builds digital products the fast way — pairing low-code platforms like Bubble, FlutterFlow and Framer with AI-assisted development and a solid backend. The result is software that ships in weeks and still holds up in production: real users, real payments, real scale.

Founded in 2023 and run out of Velur, Namakkal by **Baskaran Manimohan**, the team has delivered marketplaces, an employee-wellbeing platform, a smart-office booking system with IoT access control, a speed-dating app, a women's fitness app, and a brand-community platform for Samsung — for clients across Israel, the Gulf and Europe. Its work carries a perfect 5.0 rating across verified reviews.

FOUNDED

An agency built for speed

Where a traditional shop takes months, CloseFuture measures the gap between an idea and a shipped product in weeks.

CloseFuture calls itself an AI product studio, and the label is earned. The team compresses the usual build cycle by leaning on modern low-code platforms and AI-assisted development — without letting quality slip. The products they hand over aren't throwaway prototypes; they run in production with payments, notifications, role-based access and automation already wired in.

Two kinds of clients tend to find them. Founders come to validate an idea quickly and get a polished MVP in front of real users on a lean budget. Enterprises come for secure, scalable tools and AI features they need faster than an in-house roadmap allows. In both cases the studio behaves less like a vendor and more like an extension of the client's own team — a point that comes up again and again in reviews.

"They never say 'not possible' — they figure it out." — verified client review

Where the work goes

FOCUS AREA	SHARE OF WORK	WHAT IT COVERS
AI development	~30%	Conversational AI, semantic search, summarization, image analysis
Web development	~25%	Web apps, dashboards, marketing sites
Custom software	~20%	Bespoke platforms unifying fragmented workflows
Mobile apps	~15%	Native-feeling iOS/Android experiences
Low-/no-code	~10%	Rapid builds on Bubble, FlutterFlow, Framer

What they believe

SPEED WITH SUBSTANCE

Fast delivery that still survives production.

TRANSPARENCY

Honest, continuous communication on every build.

USER-CENTRIC DESIGN

Products shaped around real needs, not feature lists.

PARTNERSHIP

Acting as part of the client's team, not outside it.

GLOBAL SUPPORT

Coverage across time zones for clients worldwide.

PROBLEM-SOLVING

Finding a way rather than saying no.

Baskaran Manimohan

Founder — and the person clients actually talk to.

CloseFuture is led by **Baskaran Manimohan**, who also runs the personal brand *Baskaran Builds* and is a familiar name in the low-code and AI development community. He stays close to delivery: in client reviews, "Baskaran" is the contact named for responsiveness, hands-on involvement and clear communication.

His path runs through the heart of the no-code movement — time in and around **Bubble**, **Era of No Code** and **GrowthX** — sharpened by an **IIT Patna generative-AI certification** and study at **EDHEC Business School**. He often mentions growing up in a small village in India, which shapes the studio's guiding idea: high-quality product development should be fast and affordable enough for anyone with a good idea.

BACKGROUND

Role	Founder, CloseFuture
Based in	Velur, Namakkal, India
Education	EDHEC Business School; IIT Patna GenAI programme
Community	Bubble, Era of No Code, GrowthX

REACH THE STUDIO

Email	baskaran@closefuture.io
Phone	+91 74488 85080
Book a call	cal.com/closefuture/meet
Website	www.closefuture.io

Office	Velur, Namakkal, Tamil Nadu 638182

The fastest way in is a direct email or a booked call — "Book a Call" is the main invitation across the site.

What CloseFuture does

End-to-end product development, from the first whiteboard sketch to long-term care.

WEB & MOBILE APPS

Full builds — web apps, mobile apps, dashboards, tablet and kiosk interfaces — on low-code foundations with custom backends where needed.

PRODUCT DESIGN & UX

Design is treated as a specialty. Requirements become responsive, polished interfaces, refined with the client until the flow feels right.

AI-INTEGRATED SOLUTIONS

Chat and voice assistants, semantic search and matching, automated summarization, and photo/image analysis woven into real workflows.

CUSTOM PLATFORMS

Bespoke systems that pull a scattered, manual process into one product — booking, payments, notifications and access in a single place.

AUTOMATION & INTEGRATIONS

Workflow automation with n8n, plus integrations for Wix, payment gateways (Rivhit, RevenueCat), WhatsApp, notifications and IoT devices.

MAINTENANCE & SUPPORT

Long-term care — performance, upgrades and adapting the product as the audience grows — delivered across time zones.

How a project runs

STAGE	WHAT HAPPENS
1 • Discovery	Clarify goals, scope features, choose the right tools, and set a roadmap before anything is built.
2 • Product design	Turn requirements into responsive, polished designs, refined together until they're right.
3 • Development	Rapid, tested builds using low-code and AI, with regular updates so nothing is a surprise.
4 • Maintenance	Ongoing support for performance, upgrades and growth after launch.

Delivery promise: most projects go from idea to launch in **four to six weeks**.

The toolkit

"Experts in the best tools" — and a dedicated practice around each one.

CATEGORY	TOOLS
Low-code app builders	Bubble, FlutterFlow
Web, design & sites	Framer
AI development	Claude Code, Lovable, Replit
Backend & database	Supabase
Automation / workflows	n8n
Payments	Rivhit, RevenueCat
Integrations	Wix API, WhatsApp, push & email, IoT device control

CloseFuture runs a dedicated practice page for each core platform — Bubble, Framer, Supabase, FlutterFlow, n8n, Lovable and Replit — a sign of how deep the specialization goes rather than a generalist dabbling in everything.

What they've shipped

Six highlights from 100+ shipped products, across very different problems.

The portfolio has an unusually consistent shape for a young studio: take a fragmented or manual business process and turn it into one cohesive digital product, with payments, notifications, role-based access and automation built in from day one. The three flagship builds below are followed by three more shipped products.

Dipy — a marketplace for user-generated content

Dipy is an Israeli marketplace that connects brand owners with content creators. Brands post orders for videos, photos or graphics; creators browse, apply, produce the work and get paid. Simple on the surface — but the market it entered was anything but.

THE PROBLEM

Existing UGC solutions were fragmented. A brand wanting content had to stitch together separate tools for discovering creators, running quality assurance, managing revisions, handling payments and staying compliant on the legal side. Creators had it no easier — there was no single place to find good opportunities and keep an eye on what they were actually earning.

WHAT CLOSEFUTURE BUILT

A production-grade platform on **Bubble**, split into four purpose-built surfaces so each user gets exactly the interface they need:

- **Brand-owner desktop** — a command hub for creating orders, searching the creator database, sending direct invitations and tracking everything in flight.
- **Content-creator mobile** — a native-feeling interface tuned to a 420px width, for browsing orders, applying, uploading work, handling revisions and tracking earnings.
- **Brand-owner mobile** — a touch-optimized version for managing orders and talking to creators on the go.
- **Admin panel** — creator verification, order oversight and payment processing for the operations team.

THE DETAILS THAT MATTERED

- AI semantic search matching creators to orders by language, interests and personal characteristics — cutting the time brands spend choosing.
- Full bilingual support in Hebrew and English.
- Automated payments handling VAT, discount codes and partial credits.
- Notifications across four channels: push, in-app messaging, WhatsApp and email.
- A creator level-progression system that unlocks higher-value opportunities over time.
- Direct creator invitations running alongside organic applications.

Outcome — Dipy launched as a production marketplace handling hundreds of concurrent orders, with approvals and payments running largely on their own.

Liya AI — a wellbeing platform that listens

Liya AI is an intelligent employee-wellbeing platform for stress management. It blends conversational AI, real-time surveys and analytics with access to real human therapists — automation where it helps, people where it matters.

THE PROBLEM

Organizations couldn't see stress and burnout building until it was too late. Traditional surveys arrived too slowly to act on. Employees held back for fear of being identified. And HR teams had no realistic way to read and act on large volumes of open feedback.

WHAT CLOSEFUTURE BUILT

- **Liya Coach** — a conversational AI assistant supporting both text and voice, so employees can raise concerns in whatever way feels safe.
- **Survey management** — tools to create and send surveys that capture mood and engagement in real time.
- **Voice-enabled interaction** — natural-language input for intuitive, low-friction use.
- **Automated summarization** — AI that turns raw survey data into clear, actionable insight.
- **Analytics dashboard** — interactive visual reporting with advanced filters for spotting trends across teams and segments.

The platform ships as both web and mobile applications, and was completed in 2026.

Outcome — better visibility into wellbeing and faster, data-driven decisions. Voice and chat pushed participation up, while therapist integration kept the support genuinely personal — feeding into higher satisfaction and a healthier workplace.

Webiz — the office, on demand

Webiz lets professionals and companies book premium offices and meeting rooms by the hour, with no long-term contract. What makes it interesting is that the software reaches past the screen and into the building itself.

THE PROBLEM

Traditional office rentals are rigid, expensive and a poor fit for how people actually work now. Companies pay for space that sits empty, and juggle access, scheduling and billing across systems that don't talk to each other.

WHAT CLOSEFUTURE BUILT

A complete ecosystem — a mobile app, an admin dashboard and an on-site tablet application — sitting on a backend that unifies discovery, booking, payments and device control into one flow:

- **QR-code instant booking** — tablets on site show codes for immediate access and real-time availability checks.
- **Flexible scheduling** — hourly, future-dated, extended and permanent bookings.
- **Company wallet** — a shared team credit pool with member management.
- **Dynamic pricing** — bonus credit packages, per-order discounts and auto-renewal.
- **Secure payments** — integrated through Rivhit.
- **IoT control** — automated doors, electricity and air-conditioning, all from the app.

Outcome — launched July 2026 in Israel, turning rigid office rentals into flexible, self-service access and automating what used to be manual building management.

Three more shipped products

SPEED DATING · 2025

Randevmeste

A platform for offline speed-dating events where guests meet up to 30 matches a night in short rounds. The client had outgrown a Wix-only setup with no guest tracking, real-time communication, filtering or notifications.

What CloseFuture built. A custom **Bubble** app integrated with Wix over API — tickets bought on Wix flow straight into the database. Guests register by ticket number, build profiles, and move through event phases with real-time liking and matching, instant match alerts, secure post-event messaging, safety tools, and host controls.

"The app has exceeded our expectations both in terms of design and functionality." — Jozef Greftak, client

WOMEN'S FITNESS · 2025

Vigo

A fitness app built specifically for women — personalized workouts, meal tracking and AI nutrition analysis — because generic fitness apps miss the mark on personalization and motivation.

What CloseFuture built. Goal-based onboarding and plans; real-time activity/calorie tracking that adjusts dynamically; custom diet plans with portion guidance; **AI meal analysis through a WhatsApp bot** (log a meal with a photo); and subscriptions via **RevenueCat**. Launched 2025 in Israel, with strong retention.

CREATOR COMMUNITY · 2025

Galaxy Move

A mobile-first community platform connecting **Samsung** creators and fans through gamified engagement, built because existing tools lacked interactivity and scale.

What CloseFuture built. A gamified task-and-points system, community posting with direct admin contact, a real-time leaderboard, role-based admin controls (super admins vs. limited community managers), and reward redemption for gifts and coupons. Delivered as mobile and web apps, boosting engagement and brand loyalty.

From the blog

Founder-written pieces on platform choices, scaling and enterprise readiness.

Building scalable apps with FlutterFlow

21 May 2026

A guide to architecting FlutterFlow apps that grow from MVP to thousands of users. The core argument: scalability is a shared job between a strong backend (Supabase, Firebase or custom APIs doing the heavy lifting) and a disciplined frontend. It walks through backend-first architecture, clean relational data models, pagination and lazy loading, consistent naming, careful state management, reusable components, and row-level security — the difference between a demo and something production-ready.

Neon vs Supabase: a 2026 choosing & migration guide

29 April 2026

A practical comparison of two Postgres platforms: Neon, a serverless database with autoscaling and branching, versus Supabase, a full backend bundling auth, storage, realtime and auto-generated APIs. The piece weighs authentication, realtime, branching, scale-to-zero economics and pricing, then lands on a clear rule of thumb — Neon for composable, bursty, ephemeral setups; Supabase for fast MVPs and standard SaaS — and notes that migrating between them is easy in theory but 1–3 weeks of real work.

Top Framer agencies in Dubai (2026)

7 July 2026

A curated look at the Framer agencies serving Dubai's startup scene with fast, conversion-focused sites. It's one entry in a wider regional series that also covers Riyadh, along with n8n automation roundups for Germany, France, Spain and Poland, and platform guides for Lovable and FlutterFlow across the UAE and India.

FlutterFlow for Enterprise: can it handle large-scale apps?

21 May 2026

A companion to the scalability piece, this article tackles the question enterprises actually ask before committing to a low-code platform: will it hold up? It examines FlutterFlow's viability for enterprise deployments across the dimensions that decide it — scalability, performance, third-party integrations and security — arguing that with the right backend and architecture, low-code is a legitimate choice well beyond the MVP stage.

The regional agency series

April–July 2026

A run of location- and platform-specific roundups aimed at founders searching for the right build partner: top n8n automation agencies in Germany, France, Spain and Poland; Framer studios in Dubai

and Riyadh; and Lovable and FlutterFlow developers across the UAE and India. Together they double as a map of where CloseFuture sees demand for low-code and AI work concentrating in 2026.

Also on the blog: *Best Apps Built on FlutterFlow (2026)*, *Enterprise App Development Services in 2026*, and *How to Choose the Best Lovable Development Agency*.

Who they build for, and where

A global client base for a Velur, Namakkal studio.

CloseFuture's shipped work clusters in a few markets. A strong run of projects sits in **Israel** — Dipy, Webiz and Vigo all launched there — alongside enterprise work for a global brand (**Samsung**, via Galaxy Move) and European clients such as the team behind Randevmeste. The studio's published writing points at the **Gulf** (Dubai, Riyadh) and **Europe** (Germany, France, Spain, Poland) as active markets, with India as its home base.

TYPICAL CLIENTS

- Early-stage founders validating an idea
- Funded startups needing a polished MVP fast
- Enterprises wanting AI features shipped quickly
- Established brands building community or internal tools

PROBLEM SHAPES THEY SUIT

- Fragmented, multi-tool workflows to unify
- Manual processes ready for automation
- Marketplaces with two-sided complexity
- Products needing AI woven into the core flow

By keeping the team small and senior and standardizing on a handful of platforms it knows deeply, CloseFuture can quote in days and deliver in weeks — the operating model behind the four-to-six-week promise.

Working with CloseFuture

What clients say, and what an engagement looks like.

5.0 OVERALL (11 REVIEWS)	5.0 QUALITY	4.9 ON-TIME DELIVERY	5.0 VALUE
---------------------------------------	-----------------------	--------------------------------	---------------------

Across verified reviews the same themes recur: timely delivery, strong communication, tight project management, and a customer-first attitude. Clients single out responsiveness and attention to detail — and the willingness to solve hard requests rather than turn them down.

ENGAGEMENT SNAPSHOT

Hourly rate	\$25–\$49 / hour
Minimum project	\$1,000+
Common project size	Under \$10,000
Turnaround	4–6 weeks

COMMON QUESTIONS

- Design services?** Yes — a specialty, not an add-on.
- Maintenance?** Yes — long-term support for performance, upgrades and growth.
- Enterprise work?** Yes — secure, scalable, end-to-end.
- Which tools?** Bubble, FlutterFlow, Framer, Supabase, n8n, Lovable, Replit, Claude Code.

Why teams choose them

- **Speed** — weeks to launch, not months.
- **Value** — lean low-code + AI delivery keeps projects affordable.
- **Production quality** — real users, real payments, real scale.
- **Range** — web, mobile, tablet/IoT, dashboards and AI under one roof.
- **Trust** — a perfect rating and founder-level involvement.
